NUPLAZID® (pimavanserin): Effect of Crushing Tablets

This letter is being provided based on your specific request for information on the effect of crushing pimavanserin tablets.

Relevant Label Information¹

- NUPLAZID is available as 34 mg capsules and 10 mg tablets

Summary

- There is no data looking specifically at the pharmacokinetic (PK) parameters of crushed pimavanserin tablets.
- However, because pimavanserin is supplied as an immediate-release formulation,¹ no changes to PK parameters would be expected.

Background

The PK profile of pimavanserin has been evaluated in healthy participants as well as in patients with Parkinson's disease (PD). The PK of pimavanserin is similar in both the PD population, and healthy subjects.¹ The median T_{max} of pimavanserin was 6 (range 4-24) hours and was generally unaffected by dose. The bioavailability of pimavanserin oral tablet and pimavanserin solution was essentially identical.^{1,2} Participants who have received pimavanserin solution have reported a strong bitter, acidic, or burning sensation in the mouth.² Ingestion of a high-fat meal had no significant effect on rate (C_{max}) and extent (AUC) of pimavanserin exposure when administered as a tablet formulation.^{1,3}

Effect of Crushing Pimavanserin Tablets

There are no data looking specifically at the PK parameters of crushed pimavanserin tablets; however, because pimavanserin is supplied as an immediate-release formulation,¹ no changes to PK parameters would be expected.
